Personal Preface

Since the sudden and unexpected death of my husband, Hans Sauer, on 31 May 2022, one image has remained indelibly on my mind: how he was sitting at his desk the last evening of his life, looking again through the series of articles he had prepared for publication in a single volume. During the last few years of his active retirement, binomials had become one of his main academic interests. Therefore, he wanted a number of his articles on binomials, many of which were widely scattered, to be made available in a more easily accessible form: in a collection he called “*Sun and Moon, Good and Evil, Come and Go: Studies in English Binomials from ca. 850 to 2008*”.

After his death, it became quite clear to me that I was meant to ensure that this collection of articles would see the light of day because Hans had, unknowingly, “written against the clock”, not with regard to a formal but to a final deadline. So, my heartfelt thanks go to Monika Kirner-Ludwig, Kerstin Majewski, and Gaby Waxenberger, all three of them his friends and former students, who readily and generously agreed to help me bring to an end Hans’s last project by editing this collection of articles on binomials.

I express my deep sense of regret that Hans did not live to see the finished book. But I feel confident that his work – Hans having been the eminent scholar he was – will live on.

Autumn 2022

Gabriele Sauer, Stockdorf

Preface by the Editors

On 31 May 2022, we were informed of the unforeseen passing of Prof. Dr. Hans Sauer, our academic mentor, role model, and friend. As it turned out, he had dedicated some of his final hours to proof-reading his most recent volume to be published: “*Sun and Moon, Good and Evil, Come and Go: Studies in English Binomials from ca. 850 to 2008*”.

With both sadness and pride, we attended to finishing for Hans Sauer what he himself had not been granted the time to do. We thank Prof. Dr. Ursula Lenker for her support as well as Lara Widmann, who kindly invested many an hour to assist us in bibliographical research. Our heartfelt gratitude goes to Gabriele Sauer, who initially entrusted us with this task and honour.

What we hereby offer to the academic community is his enlightening essay collection on *English Binomials* in the very form Hans Sauer left it. Apart from some formal adaptations made by the publisher, who has been so kind as to continuously encourage this project to be completed, the book remains unchanged in both shape and scope and, as such, as Hans Sauer had last seen it. The order in which the chapters appear is retained as set by him, clearly mirroring the diachronic development of this particular research interest of his. Each article is a coherent body of text in its own right, which is why, for instance, we decided to keep the seemingly repetitive definition of *Binomials* that Hans Sauer provides at the beginning of each article rather than unnecessarily curtailing his texts and imposing any emendations on them.

It has been our intention to pass on to the academic world Hans Sauer’s valuable collection of articles. May the reader enjoy Hans’s profound and witty discussions and deliberations on so many intriguing aspects pertaining to the study of *English Binomials*. We are honoured to have been able to endow him with this last gesture of gratefulness for all that he has done for us.

Acknowledgements

The chapters of the present book began as a collection of some articles which I published over the past few years with an emphasis on binomials. The chapter on Aldred (iv) is more general, but because it also discusses the double glosses used by Aldred (which can be regarded as a kind of binomials) I have included this study here as well.

I have arranged the chapters according to the time when the texts discussed were written or published, not according to the year when the articles were published. The article which was published earliest is now chapter xi. There I still use the term ‘twin formulae’, but I have switched to the term ‘binomials’ since. On the whole I have left the articles largely as they were originally written or published, but I have, of course, updated them as far as possible, for example by giving the date of publication for literature which was marked as forthcoming in the articles, and I have also taken the references out of the end of the articles and amalgamated them into a comprehensive bibliography at the end of the present volume. In the previously printed version of some chapters the appendices presenting the binomials had to be omitted for reasons of space; they have usually been included here. Each chapter can be read on its own, but I have inserted cross-references.

There are still many authors and texts whose binomials have not yet been collected and analysed. The present volume is therefore a preliminary study to a history of binomials in English literature.

I thank all the publishers and editors who gave permission to republish the articles here. I have tried to contact all the copyright holders; if I have missed any, I ask them to get in touch with me or the publisher. Special thanks are due to Marlene Sauer, who assembled and formatted all the chapters. The topic of binomials is still of interest; publications by Siegfried Wenzel and Akinobu Tani are about to appear.
